

Basic *Dataview* Query Builder

WELCOME TO THE BASIC DATAVIEW QUERY BUILDER!

The Basic Dataview Query Builder will guide you through some questions and put together a dataview query based on your answers. You can use this query as-is in your vault or as a starting point to refine a more advanced query.

The goal is to help you on your first dataview queries and to give you a better understanding of the syntax and needed information to build dataview queries from scratch.

Click the button to start!

WHAT IS THIS PAGE? WHAT'S GOING ON?!

[Dataview](#) is a popular community plugin for the Personal Knowledge Management software [Obsidian.md](#), which are both brilliant and highly flexible applications that can be a bit difficult to understand in the beginning.

To make your start into dataview a tad easier, the Basic Dataview Query Builder (this very webpage) allows you to click together your first queries that'll help you understand the syntax of the plugin and guide you through the different pieces of information needed to build a useable query.

Want to learn more about dataview? Visit the [official documentation](#).

If you find a bug, have a question or would like to see another feature for the Basic Dataview Query Builder, feel free to open a issue at the [github repository](#).

Basic Dataview Query Builder v1.3.0
